                                        contains three domains; as 1-90 contains three membrane spanning domains; as 90-780 is non-membrane, and as 780-1081 contains ten possible membrane spanning domains. Some similarity in C-teminal membrane domain to eukaryotic proteins e.g. CCSA_CHLKE cytochrome C biogenesis protein C biogenesis protein C biogenesis protein C biogenesis protein C biogenesis cytochrome C biogenesis protein C biogenesis

Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   available and the accession number will be preserved

. 71	S.	13	the number of results predicted by chance to have a
			-

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ó
                                                                                                                                                                                                                         The sequence represents a plant root-preferred promoter element, RPE, isolated from a random oligonuclectide library (RGL). The invention concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random oligonuclectides. I lanked by 5 and 3' llanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the complexes and PCR amplifying the bound oligonuclectide. The method is used for isolating fissue specific promoters from plants, including but not limited to root specific promoters from plants, including but not limited to root specific promoters from plants, including but not limited to root specific promoters or root-preferred promoter elements (RPE). The RPEs are useful in the genetic manipulation of a plant when operably linked to a nucleotide sequence whose expression is to be controlled to achieve a desired phenotypic effect, e.g. abiotic stress (drought, temperature, salinity, pesticide and herbicide resistance) and biotic
                                                                                                                                                       expression of nucleotide sequences in a plant comprises identifying and isolating dissue-preferred promoter elements
                                                                                                                                                Producing tissue-preferred promoter elements constructs for regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                koot-preferred promoter element, RPE, abiotic stress, drought, salinity; pesticide resistance; herbicide resistance; biotic stress, discase resistance; tungal disease; bacterial disease; viral disease; insect attack; nematode attack; RPE21; random oligonucleotide library;

concerns a method of identifying and isolating tissue-preferred promoter elements comprising the use of a mixture of random olimproficionis, Ilanked by 5° and 3′ ilanking sequences, which hybridise to tissue specific plant nuclear proteins, isolating the complexes and PCR amplifying the bound oligonucleotide. The method is used for isolating trissue specific promoters from plants, including but not limited to root-specific promoters or root-preferred promoter elements (RPE). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Producing tissue-preferred promoter elements constructs for regulating expression of nucleotide sequences in a plant comprises identifying and isolating tissue-preferred promoter elements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RPRs are useful in the genetic manipulation of a plant when operably
linked to a nucleotide sequence whose expression is to be controlled to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Root-preferred promoter element; RPE; abiotic stress; drought; salinity; pesticide resistance; herbicide resistance; blotic stress; disease; resistance; tunqal disease; bioterial disease; viral disease; linseet attack; nemalode attack; RPE19; random oligonucleotide library;

The sequence represents a plant root-preferred promoter clement, RPE, isolated from a random oligonuclectide library (ROL). The invention concerns a method of identifying and isolating tissue-preferred promoter concerns a method of identifying and isolating tissue-preferred promoter. I lanked by 5' and 3' flanking sequences, which hybridise to tissue-specific plant nuclear proteins, isolating the complexes and PCR amplifying the bound oligonucleotide. The method is used for isolating tissue-specific promoters from plants, including but not limited to tissue-specific promoters from plants, including but not limited to root-specific promoters from plants, including but not limited to linked to a nucleotide sequence whose expression is to be controlled to a chike to a nucleotide sequence whose expression is to be controlled to achieve a desired phenotypic effect, e.g. abiotic stress (drought, temperature, salinity, pesticide and hebiotide resistance) and biotic stress (disease resistance, resistance to attack by fungi, bacteria,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;
